

Leaven Cancer Remission Assurance Program

The only cutting-edge single-cell / dual-cell therapy program utilizing Healthy Donor (Allogeneic) CIK / DC-CIK Immune Cells for superior cancer treatment, aiming to achieve **Remission and Sustained Recovery**.

REMISSION AND RECOVERY

Program Overview

Using Donor (Allogeneic) Cytokine-Induced Killer (CIK) cells for cancer treatment is an advanced immunotherapy approach that harnesses the power of donor-derived immune cells to target and eliminate cancer cells.

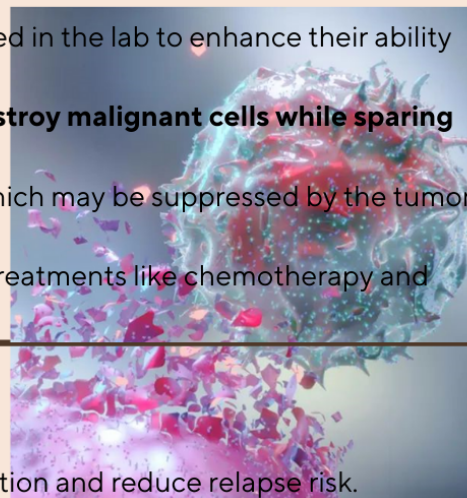

Personalized evaluation and treatment plans by a professional medical team.

Core Benefits of Allogeneic (healthy donor) CIK / DC-CIK Therapy

- ✓ **Superior Cancer Cell Killing** – Increased cytotoxic activity against a broad range of cancers, and breaking through “immune editing” of tumors.
- ✓ **Lower Risk of Graft-vs-Host Disease (GVHD)** – CIK cells have a reduced tendency to attack healthy tissues compared to other donor immune cells.
- ✓ **Immune System Support** – Restore and Strengthen immune surveillance against cancer recurrence.
- ✓ **Minimal Side Effects** – Compared to conventional treatments, CIK therapy is generally well tolerated.
- ✓ **Availability** – Significantly reducing treatment waiting time.
- ✓ **Increased Efficacy** – For patients with damaged or weakened immune cells.

Mechanism of Actions

- **Immune Activation** – Allogeneic CIK cells are expanded and activated in the lab to enhance their ability to recognize and kill cancer cells.
- **Tumor Targeting** – These cells home in on cancerous tissues and **destroy malignant cells while sparing normal tissues**.
- **Reduced Immune Evasion** – Unlike a patient’s own immune cells, which may be suppressed by the tumor, allogeneic CIK cells offer a **fresh, potent immune response**.
- **Combination Potential** – CIK therapy can be used alongside other treatments like chemotherapy and radiation therapy.

Enrolment & Patient Eligibility for Allogeneic CIK Therapy

This therapy is suitable for:

- ✓ Patients with advanced or recurrent cancer.
- ✓ Patients undergoing chemotherapy/radiation to boost immune function and reduce relapse risk.
- ✓ Post-surgical cancer patients to prevent recurrence.
- ✓ Patients with weakened immune systems needing immune restoration.

Assurance Commitment

(Money-Back Guarantee)

- Complete and sustained cancer remission is our confidence. If cancer* recurs within 5 years after remission, a 100% refund of the treatment cost will be provided to patient.
- Applies only to cases where patients strictly adhere to the prescribed treatment plan.

First-in-Market Remission Assurance or Money-back !
